Thanks to...

- VA Office of Quality and Performance
- VA Office of Mental Health Services
- Local, regional, and national leaders:
 - Quality improvement
 - Informatics and
 - Primary care
- VA clinicians
- VA patients

Overview

- Implementation of SBI in VA
 1. What worked?
 2. What didn't work so well?
 3. Reasons for optimism
- Lessons learned and next steps
- Discussion

I. What Worked ...?

Overview

I. What worked?

- Background: early research
- VA health care system
- Implementation research
 - Alcohol screening
 - Brief interventions (BI)
- Lessons learned - Greenhalgh Model

Background: Early Research

- Proposed study of AUDIT in VA clinic
- Not allowed – “too long”
- Invited to develop a brief screen
- 7 day drinking diary failed
- AUDIT-C looked promising

(Bush Arch Intern Med 1998)

Background: Early Research

For Identifying Alcohol Misuse in Men

AUDIT AUDIT-C
(

Background: Early Research

For Identifying Alcohol Misuse in Men

AUDIT AUDIT-C
(

Background: Early Research

For Identifying Alcohol Misuse in Men

AUDIT AUDIT-C
(

Background: Early Research

- 6 site group randomized quality improvement trial
- Alcohol misuse one of 6 conditions
- Mailed patient assessments
- Paper provider prompts: AUDIT, CAGE, symptoms, readiness, treatment
 - 15 minutes alcohol education
- No effect at 12 month follow-up

Background: Early Research

Audiotape Study

- Intervention patients: more alcohol-related discussions (88 vs 47%; p 0.005)
- High quality smoking cessation counseling
- Alcohol-related discussions uncomfortable; missed opportunities

(Bradley, JGIM 2002)

Early Research

Patient

“I freaked out and tried to self-medicate with alcohol . . . they got me [to the hospital] . . . and sobered me up . . . I drank enough to . . . raise my blood sugar way up there . . .”

(McCormick, JGIM 2006)

Early Research

Provider

“Well, how have your—
have—have you been checking your sugars
at all in the last few days?”

*No further discussion
of patient's drinking during this visit*

(McCormick, JGIM 2006)

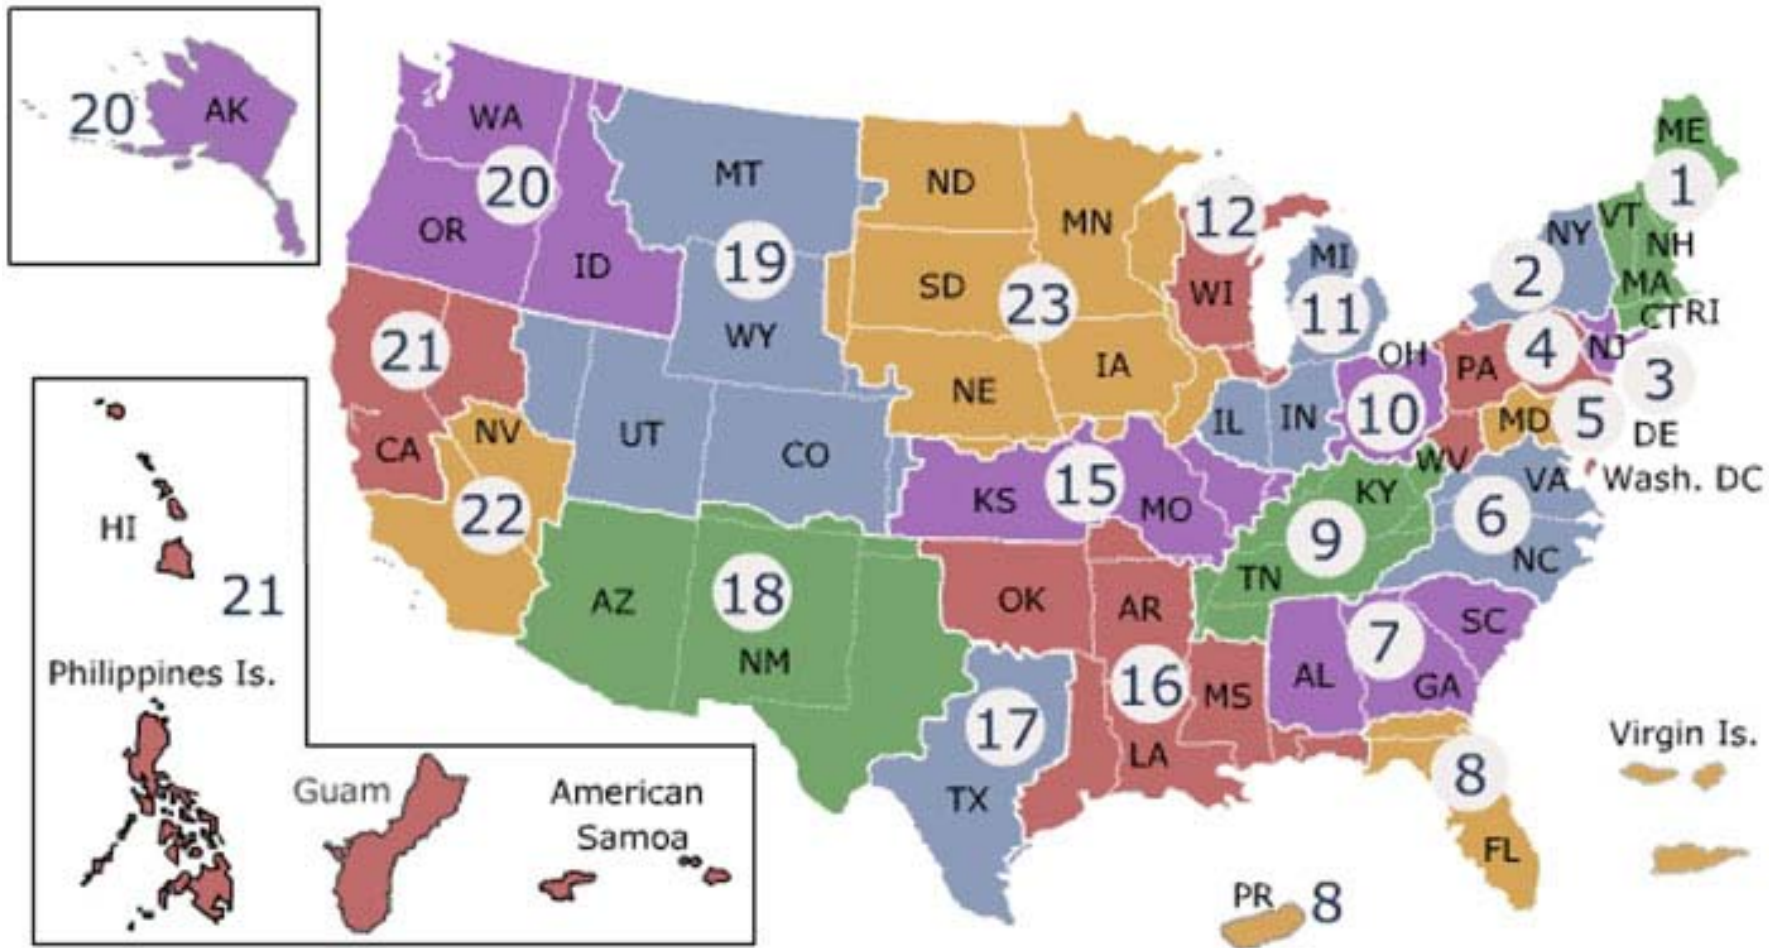

Lessons Learned

- AUDIT may be too long
- Screening and prompts got BI on busy clinical agenda at one site
- Providers appeared to need education regarding evidence-based BI
- Smoking counseling suggested
 - Providers could learn BI
 - Brief alcohol advice feasible

Implementation Research

The VA Health Care System...

VA Health Care System

VA Health Care System

- Electronic medical record (EMR)
 - Nationwide
 - “Clinical reminders”
 - Locally developed/implemented
 - Use varies across sites
 - Allow real-time monitoring
 - Shared across sites

VA Health Care System

Office of Quality & Performance (OQP)

- Monitors performance with
 - Manual record reviews, patient surveys, electronic data
- “Performance Measures”
 - Linked to \$\$ bonuses
 - Quarterly feedback

VA Health Care System

Office of Quality & Performance (OQP)

- National mandate for preventive care
 - Alcohol screening required
 - Any validated questionnaire
 - Most sites chose CAGE
 - screen for alcohol use disorders
 - High rates alcohol screening (~96%)

Screening for the Spectrum of Alcohol Misuse

Local Pilot Test of the AUDIT-C

- CAGE had been implemented -1996
> 50% screen-positives didn't drink
- Local leader asked for recommendation
- Local implementation of AUDIT-C - 1999

(Bradley, J Stud Alcohol, 2001)

Integration of AUDIT-C into EMR

- Informal network: shared AUDIT-C with mental health informatics leader
- AUDIT-C incorporated into VA's EMR
- Automatically calculated score (0-12)

National AUDIT-C Implementation

2002

- VA Office of Quality & Performance (OQP)
- Asked: “What follow-up should be required?”
- 83% of VA patients drinking • • • • •
said they weren’t getting the help they
needed for their drinking

(Kazis, OQP Report on Alcohol, 2002)
(Bradley, Am J Manag Care 2006)

National AUDIT-C Implementation

2003 - Educated OQP

- Evidence for efficacy of brief intervention
- Limitations of the CAGE – only AUD
- AUDIT-C implemented locally

(Bradley, Am J Manag Care 2006)

National AUDIT-C Implementation

2003

Invited to give 2 national video conferences

- Screening for spectrum of alcohol misuse
- Brief interventions (BI)

(Bradley, Am J Manag Care 2006)

Response to Presentations

National AUDIT-C Implementation

New Screening Performance Measure (PM)

- OQP wanted to move ahead
- Stepped approach
- Invitation: Performance Measures Work Group
- Recommended: AUDIT or AUDIT-C

National AUDIT-C Implementation

New Screening Performance Measure (PM)

- Alcohol screening PM announced 2003
- Immediate requests for
 - EMR clinical reminder
 - Educational assistance
- “Frequently Asked Questions” document

(Bradley, Am J Manag Care 2006)

AUDIT-C Clinical Reminder

Reminder Resolution: Alcohol Use Screen

A standardized tool to screen for hazardous or problem drinking should be administered to all patients. The AUDIT-C is a sensitive tool for identifying those patients who may be at risk of problems due to drinking. The risk of being alcohol dependent and experiencing problems due to drinking increases as AUDIT-C scores increase.

AUDIT-C screening questions should be asked verbatim, in private setting and with a nonjudgmental manner.

AUD-C

Unable to Screen

Due to Acute Illness

Due to Chronic, Severe Cognitive Impairment

Refused alcohol screening

[AUDIT-C Questionnaire](#)

Alcohol Use Screen:
* Indicates a Required Field

National AUDIT-C Implementation

New Performance Measure (2004)

- High rates of screening persisted
- 97% AUDIT-C
 - ~ 1.5 million screened 1st year
 - 11-36% screened positive
- AUDIT-C and question about alcohol related advice added to patient surveys

Lessons Learned - Screening

1. VA infrastructure and readiness critical
2. Performance measure created demand
 - EMR tools
 - Education
3. Performance measure + EMR resulted in high rates of documented screening

(Bradley, Am J Manag Care 2006)

Lessons Learned - Screening

3. Important Facilitators

- Local pilot test of AUDIT-C
- Working in the system – integrated with other preventive care
- Informal networks led to “diffusion” of the clinical reminder

(Bradley, Am J Manag Care 2006)

Brief Intervention (BI)

Research BI

In the Meantime ...

- Development of Clinical Reminder for brief intervention (BI) triggered by a positive AUDIT-C
- Based on an analysis of how BIs were implemented in trial

(Supported by NIAAA K23 and RWJ Foundation)

Clinical Reminder for BI

Reminder Resolution: FU Positive Alcohol Use Screen

Patients with no prior history of alcohol related problems or prior treatment for alcohol abuse or dependency who have an AUDIT-C with a score of 4-7 for men (3-7 for women) should be advised to stay within recommended drinking limits.

RECOMMENDED LIMITS:
Men: <= 14 drinks/wk and maximum of 4 drinks/occasion
Women: <= 7 drinks/wk and maximum of 3 drinks/occasion

Patients with prior alcohol problems and a positive AUDIT-C score should be considered for referral to a Substance Abuse program. These patients are at high risk of dependence.

Prior Treatment for Alcohol Use or Alcohol Dependency
 No Prior Treatment for Alcohol Use or Dependency

Does the patient drink ABOVE Recommended Limits?
Men: > 14 dr/wk or > = 5 dr/occasion
Women: > 7 dr/wk or > = 4 dr/occasion

No
 Yes

A brief intervention with the patient is indicated.
- Express concern about the patient's drinking
- Link patient's drinking to his/her health
- Advise pt to drink below recommended limits or abstain
- Offer referral as appropriate

Advise patient to abstain
 Advise to drink less than the recommended limits
 Patient's Response to Counseling

other optional interventions
 Education: Medical Problems of Alcohol Use
 Assess Alcohol Use in more Detail
 Order MH/SATP Consult if patient is interested

Clear Clinical Maint Visit Info < Back Next > Finish Cancel

FU Positive Alcohol Use Screen:
Pt has not had prior treatment for alcohol use, abuse or alcohol dependency.
Pt drinks above recommended alcohol limits.

Health Factors: ALCOHOL - ADVISE ON SAFE LIMITS, ALCOHOL - NO PRIOR TREATMENT

* Indicates a Required Field

Local Test of BI Clinical Reminder

BI Clinical Reminder

- Local pilot study – 2003-2006
- Clinicians rarely used clinical reminders
- One hallway in General Medicine Clinic
- Only 6% of patients who screened positive had BI documented

(Williams JSAD 2010)

(Supported by NIAAA K23 and RWJ Foundation)

Regional Implementation

BI Clinical Reminder

- Another facility asked for reminder (2004)
 - Informal network: informatics experts
 - 8 clinics spread over > 100 miles
 - Clinicians routinely used reminders
 - Rapid uptake over 4 months: 67% counseled

Implementation Research - BI

Sustained Rates of BI Documented with Reminder
at Facility Where Providers Used Clinical Reminders

Light blue: AUDIT-C 4-7 points;
Dark blue: AUDIT-C 8-12 points

(Bradley, Substance Abuse, 2007)

National Implementation - BI

Performance Measurement (PM) for BI - 2006

- OQP asked for a BI performance measure
- Using medical record review
- Proposed measure:
 - Advice and
 - Feedback linking alcohol use to health
- Evaluated in patients with AUDIT-C • •
(See Amy Lee's Poster this afternoon!)

National Implementation - BI

Performance Measurement (PM) for BI - 2006

- 2006 – Medical record reviews of BI begin
- 2007 – PM for BI announced
- Asked to disseminate clinical reminder
- Hastily organized clinician interviews

(Bradley, Substance Abuse 2007; Lapham, Med Care, 2010)

One Provider's View of Reminders

National Implementation - BI

- Simplified the BI clinical reminder
- Modified to match PM
- 2008 – BI PM began
- Clinical reminder for BI disseminated

(Lapham, Med Care, 2010)

National Implementation - BI

Then we sat back, waited, and watched

National Implementation - BI

Documented Advice and Feedback Among Screen-positive Patients*

* Adjusted, among patients with AUDIT-C •

(Lapham, Medical Care 2010)

National Implementation - BI

Documented Advice and Feedback Among Screen-positive Patients*

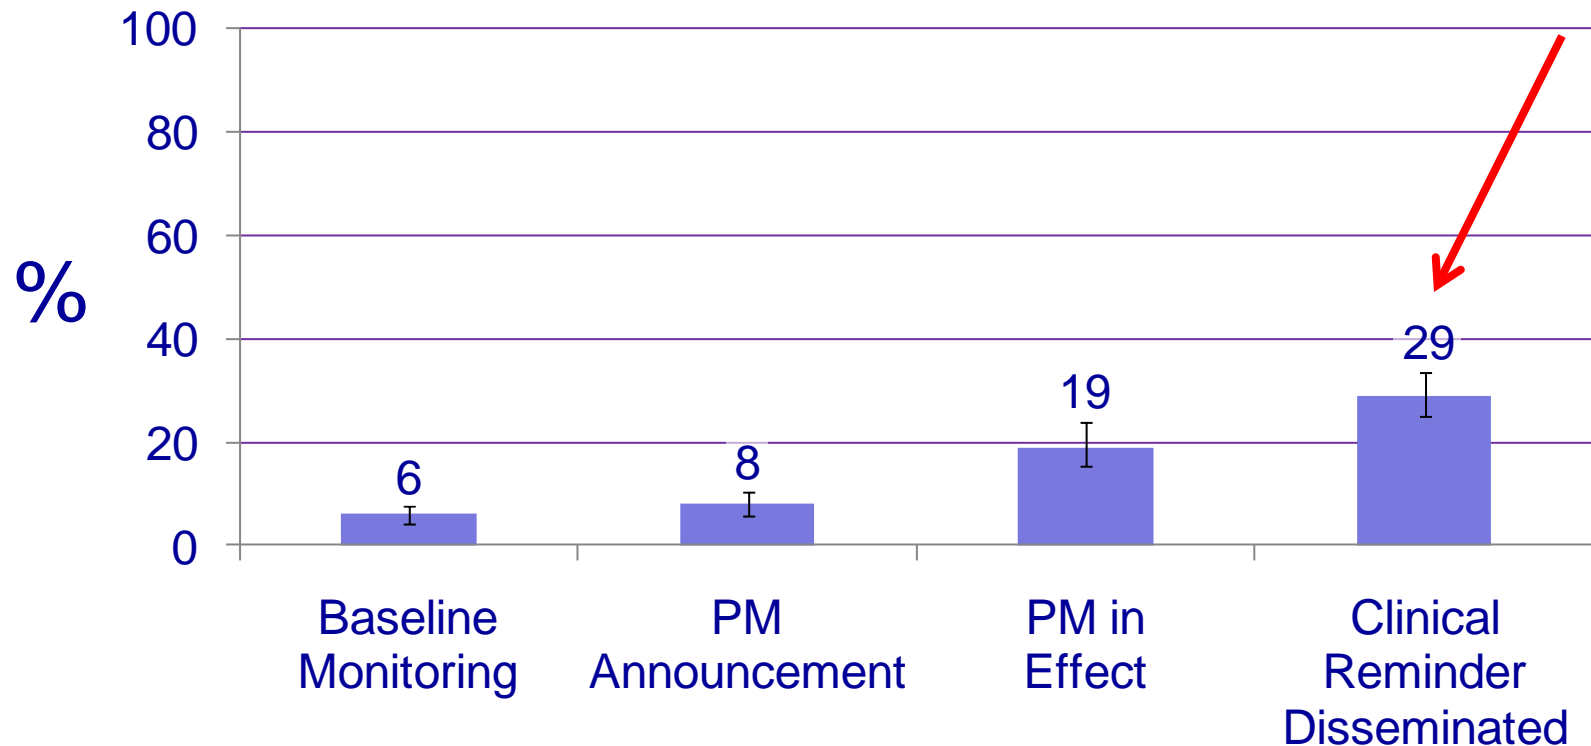

* Adjusted, among patients with AUDIT-C •

(Lapham, Medical Care 2010)

National Implementation - BI

Documented Advice and Feedback Among Screen-positive Patients*

* Adjusted, among patients with AUDIT-C •

(Lapham, Medical Care 2010)

National Implementation - BI

Any Documented Advice, Feedback or Referral
Among Screen-positive Patients*

* Adjusted, among patients with AUDIT-C •

(Lapham, Medical Care 2010)

National Implementation – BI

Ongoing

- 2009 – specific target
 - 62% of screen-positive patients
- 2011 – OQP website indicates high rates BI documented

Lessons Learned - BI

1. Performance measure for BI resulted in
 - Immediate demand for EMR tools and education
 - High rates of documented BI among patients with positive alcohol screens
2. Early qualitative and formative evaluation of informatics tools is essential

Lessons Learned - BI

3. Important Facilitators

- System infrastructure and readiness
- Working within the system
- Informal network with: quality improvement, primary care, mental health, & informatics leaders
- Partners who:
 - Set policy and incentives
 - Had resources for measurement

National Implementation - BI

4. Barriers – Variable (or no?) Education

- Left up to local VAs
- Resources made available
 - Clinical reminder
 - Video and teleconference
 - PM technical manual
 - “Frequently Asked Questions”
 - Presentations national meetings
 - Online links and presentations

Lessons Learned - Screening

4. Barriers - Research Funding

- Traditional approaches too slow
- Research funding came from:
 - Career grants
 - Quality enhancement research (QuERI)
 - Core funding & “rapid response” projects
 - Other VA quality improvement \$

Sometimes

Things Didn't Go as We'd Like

Quality of Alcohol Screening

Quality of Screening?

Early Concerns

- Local observations
- Variation in prevalence of positive screens across networks
 - 4.9% (4.3-5.5%)
 - 11.2% (10.3-12.1%)

“Educated” Clinicians

Reminder Resolution: Alcohol Use Screen

A standardized tool to screen for hazardous or problem drinking should be administered to all patients. The AUDIT-C is a sensitive tool for identifying those patients who may be at risk of problems due to drinking. The risk of being alcohol dependent and experiencing problems due to drinking increases as AUDIT-C scores increase.

AUDIT-C screening questions should be asked verbatim, in private setting and with a nonjudgmental manner.

AUD-C

Clinical vs Survey AUDIT-Cs

Study of Discordance between Documented and Survey AUDIT-Cs

- 6,861 outpatients who had both
 - Survey AUDIT-C and EMR AUDIT-C
 - Within 90 days
- Discordant screen = positive survey screen and negative clinical screen or vice versa

(Data provided by VA Office of Quality and Performance)

(Bradley, JGIM 2010)

Clinical vs Survey AUDIT-Cs

Survey Screen

	Negative (n 6,096)	Positive (n 765)
Clinical Screen	N (%)	N (%)
Negative (N 6,471)	6,003 (98)	468 (61)
Positive (N 390)	93 (2)	297 (39)

(Data provided by VA Office of Quality and Performance)
(Bradley, JGIM 2010)

Clinical vs Survey AUDIT-Cs

Survey Screen

	Negative (n 6,096)	Positive (n 765)
Clinical Screen	N (%)	N (%)
Negative (N 6,471)	6,003 (98)	468 (61)
Positive (N 390)	93 (2)	297 (39)

(Data provided by VA Office of Quality and Performance)
(Bradley, JGIM 2010)

Clinical vs Survey AUDIT-Cs

Survey Screen

	Negative (n 6,096)	Positive (n 765)
Clinical Screen	N (%)	N (%)
Negative (N 6,471)	6,003 (98)	468 (61)
Positive (N 390)	93 (2)	297 (39)

(Data provided by VA Office of Quality and Performance)
(Bradley, JGIM 2010)

Clinical vs Survey AUDIT-Cs

Discordance not Associated with...

- Order of survey and clinical screens
- Time between screens
- Timing regarding implementation
 - Dissemination of clinical reminder
 - Performance measure for BI

Clinical vs Survey AUDIT-Cs

Discordance was Associated with...

- Survey AUDIT-C scores

(Data provided by VA Office of Quality and Performance)
(Bradley, JGIM 2010)

Clinical vs Survey AUDIT-Cs

(Data provided by VA Office of Quality and Performance)

(Bradley, JGIM 2011)

Clinical vs Survey AUDIT-Cs

(Data provided by VA Office of Quality and Performance)

(Bradley, JGIM 2011)

Clinical vs Survey AUDIT-Cs

(Data provided by VA Office of Quality and Performance)

(Bradley, JGIM 2011)

Clinical vs Survey AUDIT-Cs

Discordance Also Associated with...

- African American (2-fold increase)
- VA network

(Data provided by VA Office of Quality and Performance)
(Bradley, JGIM 2010)

Quality of Screening

Summary

- Many patients with alcohol misuse are being missed by clinical screening
- Some networks missing more than others
- Use of a validated screen does not ensure valid screening

An Unexpected Consequence ...

An Unexpected Consequence ...

Variability in screening quality undermined the validity of our BI Performance Measure

BI Performance Measurement

Networks each screen 1000 patients	# Positive Screen /1000 Screened	# with BI /1000 Screened
X	50	30
Y	110	55

Recommendations

- Screening-based performance measures should be avoided
- BI performance is best measured with patient report surveys

Recommendations

- “In the last 12 months, at how many visits were you advised by a VA nurse, doctor or other health provider to drink below recommended limits or abstain from drinking alcohol?”
None, 1 visit, 2-4 visits, 5-9 visits, • ‰• • •
- Encourages identification and repeated BI

Part III

Are they just “ticking the boxes”?

Reasons for Guarded Optimism

Reasons for Optimism

Association between BI and Resolution of Alcohol Misuse at Follow-up Screening

BI Documented in EMR Clinical Reminder?

(Williams, JGIM 2010)

Reasons for Optimism

Association between BI and Resolution of Alcohol Misuse at Follow-up Screening

BI Documented in EMR Clinical Reminder?

(Williams, JGIM 2010)

Reasons for Optimism

Association between BI and Resolution of Alcohol Misuse at Follow-up Screening

BI Documented in EMR Clinical Reminder?

(Williams, JGIM 2010)

Summary

- Performance measures linked to incentives plus EMR decision support:
 - Get SBI on the busy clinical agenda
 - Result in high rates of documented alcohol screening and BI
 - Are associated with resolution of alcohol misuse at follow-up screening

Next Steps

Ongoing Research

- VA RRP: Identification and evaluation of sites with “best practices” for screening & BI
- VA RRP: Who doesn't need annual screening?
 - Such low risk of converting to positive screen that the screening interval could be increased

Next Steps

Ongoing Research

- VA IIR: Is the AUDIT-C a valid measure of change? Is resolution of alcohol misuse at follow-up screening associated with improved health outcomes?
- NIAAA R01: Can a collaborative care model improve outcomes of primary care patients with AUD not ready for treatment?

Thank You!

Questions?
