September 18<sup>th</sup> – 19<sup>th</sup>, 2014**

# Introduction

- In PHC, SBI is effective in reducing alcohol consumption (Kaner et al, 2007) and improving health outcomes, however, less than 10% of the population at risk are identified, and less than 5% of those who could benefit are offered SBI in PHC settings (Anderson, 2009).

-Reasons for low implementation:

- Little alcohol-related education (Wilson et al 2011)
- Lack of role security and therapeutic commitment (Anderson et al, 2004)
- Lack of adequate recourses and support (Nilsen, 2010)
- Time constraints (perceived workload & work pressure (U. Sheffield, 2009)).

-According to ODHIN results:

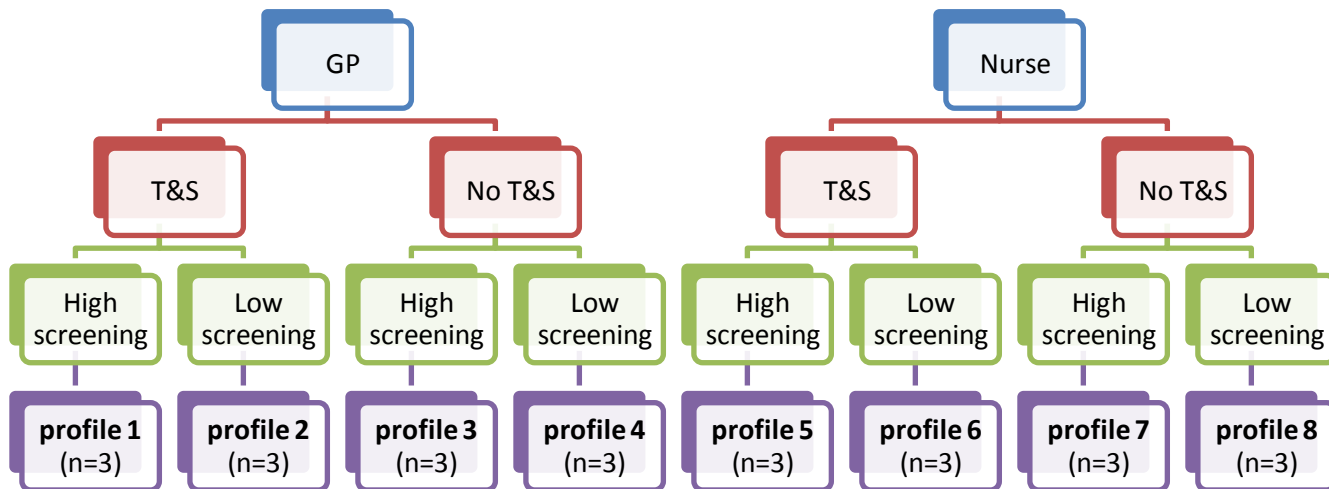

- Provision of training and support and of financial reimbursement increased intervention rates, largely due to increases in screening activity. The provision of training and support also increased brief advice activity (Anderson et al, 2014).
- GP with higher levels of education on alcohol problems and those who felt more secure in managing problematic patients managed a higher number of patients (Anderson et al, 2014).

# Objective and methods (1)

**Objective:** To explore qualitatively **why, how** and **under what circumstances** the ODHIN RCT implementation strategies **worked**

**Participants invited by purposeful sampling:**

- GPs vs nurses
- Offered Training & Support vs no Training & Support
- Relatively high screening rates vs relatively low screening rates
- Netherlands, Catalonia, Sweden, and Poland

# Objective and methods (2)

**Data collection:** semi-structured questionnaire including the following topic list:

- 1) Engagement: Reasons for subscribing ODHIN
- 2) Description of the SBI Implementation process: Difficulties/barriers/enablers
- 3) Expectations
- 4) Barriers and facilitators for following the guidelines
- 5) ODHIN facilitators: how ODHIN facilitated SBI
- 6) Role of your organization/PHCU and to politics (barriers/ facilitators)
- 7) Recommendations to other PHCUs addressed to increase SBI activity

**Analysis:**

- Interviews were recorded, made anonymous and transcribed verbatim
- Two researchers at each centre proceeded to encode independently (achievement of 75%-80% of inter-rater reliability required for single-coding)

# Objective and methods (3)

Factors of influence probably fit in one of the 7 TICD framework domains (Flottorp et al, 2013):

1. **Guideline factors**
2. **Individual health professional factors**
3. **Patient factors**
4. **Professional interactions**
5. **Incentives and resources**
6. **Capacity for organizational change**
7. **Social, political and legal factors**

- New domains were added where necessary
- Conference calls to reach agreement about international codebook
- To do: affinity diagram method (Johnson et al, 2012)

# Results - Activity

Country	% of response to the interview*	Number of transcribed interviews
Catalonia	60%	24
Poland	88%	14
The Netherlands	70%	19
Sweden	Xx	Xx

Reasons for non-participation were lack of time, failed phone contacts, wrong telephone number, etc

# Results - Codebook

Factor	The Netherlands	Catalonia	Sweden	Poland
<b>Participation in ODHIN</b>	<ul style="list-style-type: none"> <li>- <u>Participation was a source of awareness</u> and stimulated SBI</li> <li>- For some providers ODHIN was an important <u>wakeup call</u> in itself</li> <li>- ODHIN was used as an <u>'excuse'</u> to ask about <u>alcohol</u> consumption "it was easier for me to ask about alcohol consumption"</li> </ul>	<ul style="list-style-type: none"> <li>- GP's and Nurses showed interest in research as a way to <u>improve their clinical practice</u></li> <li>- Centre <u>institutional decisions</u> motivated participation in ODHIN</li> <li>- <u>Rising awareness</u> on alcohol, as with tobacco, motivated participation in ODHIN</li> </ul>	<ul style="list-style-type: none"> <li>- Respondents emphasized that they <u>appreciated being in the training group</u></li> <li>- Those who weren't said that they had been <u>hoping to be in the training and support group</u></li> </ul>	<ul style="list-style-type: none"> <li>- GPs participating in ODHIN had their <u>own pattern of choosing patients</u> for SBI (associated pathologies, age, gender, knowledge about patient's life story)</li> <li>- <u>GPs didn't expect certain groups</u> of patients to drink in a risky way</li> </ul>
<b>ODHIN: Facilitators Barriers</b>	<ul style="list-style-type: none"> <li>- Professionals <u>learned about the damage</u> of alcohol consumption</li> <li>- Professionals <u>learned techniques</u> to discuss alcohol consumption with patients</li> <li>- <u>Opportunity to discuss</u> harmful alcohol consumption and motivate patients to decrease it</li> </ul>	<ul style="list-style-type: none"> <li>- Protocol integrated in the electronic medical record</li> <li>- <u>Initial doubts</u> about SBI and techniques to approach patients</li> <li>- <u>Usefulness of AUDIT</u> and its potential use in the electronic medical records.</li> <li>- <u>Work load and lack of personnel</u> at centres</li> <li>- Implementation of <u>SBI was a little bit difficult</u> (no T&amp;S group)</li> </ul>	<ul style="list-style-type: none"> <li>- Having <u>pauses in the study was confusing</u> for several respondents</li> </ul>	<ul style="list-style-type: none"> <li>- Most GPs found the <u>screening tool useful</u> – it helped them to start and structure the conversation about alcohol issues</li> <li>- The main barrier to screening and BI <u>was lack of time</u> (too many patients)</li> </ul>

# Results

Factor	The Netherlands	Catalonia	Sweden	Poland
<b>Financial Incentives</b>	<ul style="list-style-type: none"> <li>- Professionals seemed <u>doubtful about effectiveness</u> of financial incentives</li> <li>- Professionals were <u>not stimulated</u> by this method of incentivizing</li> </ul>	<ul style="list-style-type: none"> <li>- Money was considered as <u>an extra motivational factor</u>, not fully determinant but helpful: "When at least little money is given, that helps"(DGR)</li> </ul>	<ul style="list-style-type: none"> <li>- Money wasn't a reason for providing more SBI</li> </ul>	<ul style="list-style-type: none"> <li>- Financial <u>incentive enhanced GPs' motivation</u> to participate and perform screening and BI</li> </ul>
<b>eBI (eHealth)</b>	<ul style="list-style-type: none"> <li>- Despite the availability of e-health, "<u>face to face care</u>" is usually desirable</li> <li>- Professionals do not use e-health because asking about alcohol and facilitating access is time consuming</li> <li>- Professionals usually didn't become familiar with the eBI website</li> </ul>	<ul style="list-style-type: none"> <li>- Despite opportunities for PHC of eBI, many <u>professionals reported low use</u> and little opportunities of implementing it in this population.</li> </ul>	<ul style="list-style-type: none"> <li>- Respondents <u>weren't confident about the use of e-health</u>, (age of professional's and lack of control of the access to help)</li> </ul>	
<b>Proposals for PHC</b>	<ul style="list-style-type: none"> <li>- Make <u>it part of routine/part of your protocol</u></li> <li>- Give more attention to <u>the burden of alcohol consumption</u> in the media, debates, regulations</li> <li>- Remains difficult, so <u>continuing education</u> in motivational interviewing is recommended</li> </ul>	<ul style="list-style-type: none"> <li>- Integrating <u>AUDIT in the electronic system</u> of clinical records</li> <li>- <u>Training, support and background</u> should be included during the whole process of SBI</li> </ul>	<ul style="list-style-type: none"> <li>- Several respondents expressed that they wanted <u>SBI as a routine at the PHCU</u>.</li> </ul>	<ul style="list-style-type: none"> <li>- <u>More time per patient</u> is a necessary factor for SBI</li> <li>- Alcohol part of lifestyles questions during 1 interview (new patients)</li> </ul>

# Preliminary conclusions

- The overall assessment of the ODHIN was positive
- Low social awareness on alcohol, health care pressure and lack of time were the main barriers
  - Organizational, contextual and center actions are needed to address them
- Access to training in SBI was highly valued (anticipation of the provision of useful tools) and had a great influence in the decision (motivation) of taking part in the study
  - Follow-up, feedback and continuation over time required
- Impact of financial support was limited in the Netherlands and Sweden but important in Catalonia and Poland.
  - Reasons for that are not explained but it might be related with salaries and incentives (at national level.
- Many reasons (time consuming, lack of professional's familiarization etc.) led to the misuse and lack of confidence of the facilitated e-SBI across all countries
- Participants noted that results obtained during research should be given back in a way (individually) that can be useful to improve their SBI activity.
